

Environmental Policy Statement 2019

KiWi Power was founded due to the need for a more sustainable method of balancing the supply and demand of energy. KiWi works in collaboration with Transmission System Operators (TSOs), such as National, to achieve this. KiWi has been a key player in the market since 2009 and provides Demand Side Response (DSR) and Energy Storage solutions in UK and Internationally. DSR and Energy Storage are methods of reducing electricity consumption at times of peak demand. These programmes help TSOs reduce the need to use outdated, expensive and polluting, fossil fuel “peaking” power stations.

KiWi is committed to promoting sustainability - its concern for the environment and endorsing a broader sustainability agenda are integral to KiWi’s professional activities through its DSR and Energy Storage offering.

KiWi aims to follow and promote good sustainability practice throughout its organisation, in collaboration with stakeholders to help reduce the environmental impacts of its activities.

KiWi operates ensuring compliance with all applicable environmental legislation and seeking, where practicable, to reduce the impact of its operations on the environment. KiWi operates in compliance with all applicable UK legal requirements and is committed to:

- Evaluate its environmental performance and use low impact technology solutions
- Promote a culture of continual environmental improvement
- Ensuring operations have minimal impact on the environment (working practices)
- Identify, prevent and mitigate against potential incidents that could adversely impact the environment
- Where practicable, reduce the consumption of resources (i.e. energy and materials)
- Prevent pollution and enhance the environment
- Minimise waste through reuse, recovery or recycling, where feasible

KiWi promotes practicing positive environmental commitment to all its stakeholders.

Management Systems

KiWi has a robust ISO 9001 and OHSAS 18001 based Management System, which is in the process of being expanded to include the requirements of ISO 27001. KiWi is currently certified to international standards by ISOQAR (a UKAS accredited company):

- ISO9001:2015 – Quality Management
- OHSAS18001:2007 – Occupational Health and Safety

Environmental Policy Statement 2019

Scope

The scope of the certified Occupational Health and Safety Management System covers 'The provision of demand side response, through the use of innovative energy technology'.

This policy is supported by a documented and certified Quality and Occupational Health and Safety Management System, which details how KiWi effectively manages the significant risks associated with the processes carried out. This policy will be reviewed annually and updated as necessary to ensure continued compliance with KiWi requirements, strategy and current legislation.

Availability

Copies of all KiWi policies and the procedures that support them are available on Dropbox to all members of staff. All KiWi policies are available to view on KiWi's website and in the main office break out area. All other documents will be made available to interested third parties upon request.
